Energy Smart Awareness Brown Bag
E Source Efficiency and Demand Response Program -

Join us on July 12, 2012 - BPA provides all or our customers with access to E Sources Efficiency and Demand Response Programs Service To help you get the most out of this resource we will be hosting a brown bag to provide details on what this service has to offer... More

Energy Smart Awareness Brown Bag
HVAC Trade Ally Network -

Join us Wednesday July 18, 2012 for a brown bag presentation and discussion on the potential development of a Trade Ally Network to support regional commercial HVAC programs. This network would build on the success and model of the NW Lighting TAN to expand the opportunities in other commercial energy efficiency measures... More

NW Regional Public Utility Behavior Based Energy Efficiency Programs July Conference Call -

Join us on Tuesday, July 17, 2012 from 1:00 – 2:00pm (PST) for Puget Sound Energy's Home Energy Reports Program: Three Year Impact, Behavioral and Process Evaluation Overview.

BPA convenes monthly conference calls for its public utility customers who are interested in behavior based energy efficiency programs. These programs focus on energy savings resulting from changes in individual or organizational behavior and decision-making.

This month Bobette Wilhelm presents the results of a three year study about Puget Sound Energy's Home Energy Reports program. Learn about one of the most sophisticated implementations of OPower's Home Energy Reports product and what happens when they stopped sending some of their customer's reports... More

Reminders

Revised DHP Qualified Product List now available -

An updated version of the Qualified Product List is available here. BPA will be updating this List on a quarterly basis. Please contact Mark Johnson if the make and model of DHP that a contractor is interested in installing is not on the list, yet meets program requirements. Please provide BPA with the make, model and AHRI number. BPA will review that model's specifications, determine if it meets program requirements, and notify the interested parties of our determination.

High Performance Manufactured Home presentation posted -

For the past year, BPA and Northwest Energy Works (NEW) have been working to develop a higher efficiency specification for new manufactured homes, as well as an updated NEEM reporting system. On May 15th the RTF approved the UES for this High Performance Manufactured Home (HPMH) specification, estimated to deliver 50% greater savings over the current NW Energy Efficient Manufactured Home (NEEM) spec.

On June 18th, BPA and NEW hosted a presentation of the High Performance Manufactured Home specification. The presentation included the history of BPA and utility involvement with the Manufactured Housing industry, an overview of the current state of the industry and the NEEM program, a detailed presentation of the High Performance Manufactured Home (HPMH) specification, a discussion of program mechanisms for consideration, and possible next steps.

If you missed that presentation, it is now available online on the Energy Smart Awareness page: High Performance Manufactured Home (HPMH) Presentation

Questions about the specification may be directed to Mark Johnson, BPA Program Manager 503-230-7669
