Proposed Rebuild of the Libby (FEC) to Troy section of BPA's Libby to Bonners Ferry 115-kilovolt Transmission Line
"I'd like to tell you . . . "

LTS-006
MAY 2 2005

1. Please have your environmental studies look at: The Electromagnetic Fields created by these lines. If the Kilovolts increase so do the EMF'S. I am against any lines being put closer to my house and any increase in voltage.

2. I need more information about: EMF'S. I have studied them and believe they can be harmful at close range.

comment: I called not more than a month ago & was informed that BPA new nothing about any line/pole changes. What is up with that?

3. I have these other comments: I don't want any lines that will put out any more Electro-Magnetic Fields than is already here. Less would be Better. I am sorry I can not be at the May 20th meeting. I will be out of town on business. But my family (household) is against any lines that increase or move closer EMF'S. If you can assure me the new lines will not be closer or more EMF output I will be fine with it.

Please put me on your project mailing list. (You are already on the mailing list, if you have received mailed notices.)
