Proposed Rebuild of the Libby (FEC) to Troy section of BPA's Libby to Bonners Ferry 115-kilovolt Transmission Lin
"I'd like to tell you . . . "

1. Please have your environmental studies look at:
I - George J Bake - In consern for my neighbors of the power line going through there property - Living establish ments. It would be better for everybodie that the line that is going through there now, that the power line should be move up the hill, possibly up the ridge and then down above Kimberlins and go through the notch with it. By going through the notch it would miss the Big Hom terrace and all the people back

2. I ~~need more information~~ about:
from it. That way you guys could up power your transmission line to 230. which is going to be need for future.
I all so feel that having a dead line September 30 is to short of a time and should be extened for longer time. I also feel that rerouting for a new power line is not going to hurt the bears. It is going to make

3. ~~I have the following comments~~:
a good habitat for the deer and the elk and all the rest of the animals. For as roads making access to your new power line the roads can be gated - every thing else is gated anyway.

Please put me on your project mailing list. (You are already on the mailing list, if you have received mailed notices.)
