Final Environmental Impact Statement

Appendix T

Public Comment Report

Note: The Section 508 amendment of the Rehabilitation Act of 1973 requires that the information in federal documents be accessible to individuals with disabilities. The Agency has made every effort to ensure that the information in Appendix T: Public Comment Report is accessible. However, if readers have any issues accessing the information in this appendix, please contact the U.S. Army Corps of Engineers at (800) 290-5033 or info@crso.info so additional accommodations may be provided.

LIST OF TABLES

PUBLIC COMMENT REPORT

1.1 INTRODUCTION

This Public Comment Report provides information regarding the comments received during the Draft EIS public involvement period which occurred from February 28 to April 13, 2020. This report also provides responses from the co-lead agencies to the substantive comments received. Please see Chapter 9 of the Final Environmental Impact Statement (EIS) for a summary of public scoping, details on the public comment period, and details on meetings held with the public, agencies, and Tribes.

1.2 COMMENTS RECEIVED

1.2.1 Number and Types of Comments Received

The co-lead agencies received a total of 58,849 submissions (also called letters in this report) during the public comment period. Submissions were received via the co-agency website, hard copy, testimony during public hearing, and email. Of the individual submissions, 4,572 were unique (i.e., original submissions that did not have identical or almost identical wording as another submission) with the remainder submitted as "form" (i.e., submissions containing identical content) or form submissions with slight modifications (e.g., one or two unique sentences added, but otherwise identical to a form). The form submissions all originated from a total of 36 unique form masters, some of which shared overlapping phrases or bullet points.

The co-lead agencies reviewed and considered all submissions received during the public comment period.

1.2.2 List of Individuals/Organizations/Agencies Submitting Comments

A list of all individuals, organizations, and agencies that submitted comments during the public comment period is shown in Table 1-1. The co-lead agencies received 2,034 submissions from entities that did not provide a name or affiliation. Therefore, there will be letter numbers in Table 1-1 with no commenter name, email, or affiliation.

If a letter contained substantive comments, that letter number and associated comment number will also be found in Table 1-2, with the co-lead agency response to the substantive comment. Due to size limitations for upload on the project website, some commenters submitted multiple times. Often these additional submissions were reference materials that do not require a response from the co-lead agencies. Submissions that did not contain comment letters are identified with an asterisk (*) in Table 1-1.

Table 1-1 has been partitioned so that comments are organized in this order: tribes, federal agencies, state agencies, local municipalities, organizations, individuals, and finally anonymous comment. Within the partitions, Table 1-1 is organized alphabetically by the last name and first name of the commenter. The website that was set up for receiving comments, indicated that

commenter names were optional to provide. Many commenters did not provide their name. Following the listing of alphabetical names, the commenters are then organized alphabetically by e-mail for those commenters that provided their e-mail address. Finally, comments are organized by those comments that are anonymous (did not provide either name or e-mail) and sequentially in the order those comments were received. For commenters to locate responses to substantive comments, they will first find their identifier (name or e-mail address) in Table 1-1 and the associated letter number for their comment. Commenters will then use that letter number to find their comment and the associated response in Table 1-2. If a commenter submitted a form letter that contained substantive comments, the responses to those form letter comments can be found in Table 1-4 under the form letter number. If a commenter had further substantive comments, those responses will be found in Table 1-2 under the unique letter number.

Table 1-1. Table of Commenters (Name, Email, and Affiliation listed if provided)

Commenter Last Name	Commenter First Name	Commenter email	Affiliation	Comment Source (Web/Email/Hard Copy/Public Meeting)	Letter No.	Form Letter No.
TRIBES						
Cawston	Rodney	not provided	Confederated Tribes of the Colville Reservation	Hand-delivered or oral testimony (personally delivered)	4251	N/A
Cawston	Rodney	not provided	Confederated Tribes of the Colville Reservation	US Mail or commercial carrier (UPS, FedEx)	32376	N/A
not provided	Confederated Tribes of the Colville Reservation	not provided	Confederated Tribes of the Colville Reservation	Email	32262	N/A
Dick	Cecil	calla.hagle@burnspaiute-nsn.gov	Burns Paiute Tribe	Web-based comments	6040. However, no attachment provided. The co-lead agencies reached out and the Tribe indicated that USRT represented the Tribes comments. These comments are under letter 6162.	N/A
Evans	Carol	not provided	Spokane Tribe of Indians	Email	32263	N/A
Hauser	Scott	scott.hauser@usrtf.org	Upper Snake River Tribes Foundation on behalf of Burns Paiute Tribe, Fort McDermitt Paiute-Shoshone Tribe, and Shoshone-Paiute Tribes of the Duck Valley Reservation.	Web-based comments	6162	N/A
