

# **Bonneville Power Administration**

## **Expanded Standard Offer for Commercial & Industrial Lighting**

### **Summary of Requirements**

The Expanded Standard Offer (ESO) provides rebates for retrofits of lighting in commercial and industrial facilities. This page gives a general summary of project requirements from Attachment A of the generic contract template. All BPA payments shall be governed by the terms of a particular Conservation Augmentation Purchase of Conservation Agreement.

#### **Program Requirements**

1. The facility shall be non-residential and served by «Utility».
2. Rebates are available for replacement of existing equipment in existing facilities only.
3. The measures eligible for payment include only those listed in the Lighting Rebate Verification Report.
4. The total rebate for each project shall not exceed 70 percent of the total project cost.
5. All projects must reduce the affected lighting wattage by 30 percent or greater.
6. All payments or savings under this Project «#» must be passed through from BPA to the end-user by «Utility».
7. «Utility» shall ensure that all materials, including PCB ballasts, are disposed of or recycled in accordance with current environmental laws.

#### **Technical Interpretations**

«Utility» may submit technical questions in writing, including E-mail, to BPA regarding the specifications and the rebate list.

#### **Consideration of Non-Standard Measures**

The intent of the ESO rebate list is to provide standard incentives for common lighting efficiency measures. «Utility» may request, on a case-by-case basis, BPA consideration of lighting measures that are not included in the Lighting Rebate Verification Report. Such measures must be determined by BPA to be cost-effective measures and meet general Conservation Augmentation program requirements. BPA reserves the right to approve or disapprove use of such non-standard measures.

#### **Energy Savings Verification**

1. «Utility» shall inspect all installations to ensure measures are installed correctly and that the measures meet the specifications listed in section F of this Project «#». «Utility» shall:
  - a) Complete a signed and dated Lighting Rebate Verification Report for each project;
  - b) Attach the lighting audit for each facility showing the wattage reductions and energy savings;
  - c) Attach any cut sheets or equipment descriptions for the installed equipment;
  - d) Submit the above with an invoice as described below.
2. «Utility» shall retain all supporting documents for each project that include, but are not limited to: purchase orders, subcontractor invoices, pre-project estimates, or other related project documents. BPA may review these records as provided for in the Agreement.

#### **Invoicing BPA**

«Utility» may invoice BPA when projects are complete, but no more often than once a month. BPA shall review and upon acceptance pay the reimbursements for measures installed. «Utility» shall, if requested by BPA, arrange for an on-site inspection by BPA of the measures installed.
