

Real Translation Process Issues

- What needs to be filed on March 1?
 - Final MW and \$s (final translation results and transfer payments, subject to true up immediately before RTO commences operations)
 - Representative translations
 - Rules for translation to be implemented by RTO
- How “mechanical” can (should) the translation be?

- Balance between CMCG discussions and private negotiations between contract parties (would addition of transfer payment negotiations make any difference?)
 - CMCG for everything
 - Private negotiations to determine initial input, then open to CMCG
 - Private negotiations to accomplish preliminary translation, the details of which would be disclosed, evaluated, and, possibly, modified by the CMCG

- To the extent there are private discussions, who should be involved?
 - Contract parties
 - Directly affected parties

- What is a realistic timeframe for the translation?
- What type of backstop should there be?
 - FERC
 - Binding Dispute Resolution
