

(Local Libby Bighorn Terrace concerns about BPA power line upgrade)

- A. Homes and area population in the Kootenai Valley continues to grow & has more than trebled in the last ten years.*
- B. More people are using the power line access daily for a walking trail, biking, riding ATV's and snow mobile riding during winter months.*
- C. My wife and I have personally seen fires and down power lines at least 3 times in the last ten years.*
- D. As our area continues to grow we have seen more and more children playing under and around the power lines.*
- E. We are hearing more people complaining about the power line being a detrimental health hazard.*
- F. As people continue building homes along both sides of the power line...it's only a matter of time before someone is killed by down power cables.*
- G. People are curious to see what causes the cracking and sparkling of down power lines and want to investigate far too closely during the snowy winter months and is a definite life threatening situation.*
- H. Approximately 1 acre of my land...and other folks property has been rendered useless... and possible expansion and/or upgrading will take property which I and others would like to build on for family members and use for other possible needs.*
- I. I have personally seen children shooting BB rifles at birds and squirrels perched on power line poles. Shotguns & high power rifles could possibly be next.*
- J. Re-routing existing power lines away from growing populated areas and increasing power levels to K-3 voltage for later usage seems to be a logical plan. It would remove the vast majority of human outcry of detriment & concern. It would also allow land owners to reclaim valuable property for continued inevitable advancement without the existing worries of possible life threatening power lines in the midst of human population and growth.*
- K. Time changes all things through population and technological growth. Isn't it just possible that time has come for BPA to re-evaluate moving to the next level of growth in providing their much needed services for human needs to the next level as well?*
