

Gentlemen/Mesdames:

Recently I learned that there is a proposal to exterminate millions of healthy vibrant trout within the BMW area because they are not "genetically pure" and need to be replaced. I spent eight days in that wonderful country with an outfitter who "live by the law of the land," that is, he was extremely conscious of all laws and regulations, especially regarding the fishery. It seems very odd to me that you (whoever) would want to disturb a vibrant healthy fishery WITHIN A WILDERNESS AREA, because there may be some hybrid fish in the system. Hybrid fish adapt and live healthy lives just like us humans, the entire United States Of America is a hybrid!! I encourage you to revisit/restudy/rethink this situation through, after all, this is a WILDERNESS AREA!!
