Subject: Proposed Summer Falls /Main Canal Hydropower Interconnection

Hello:

I just received a copy of your proposal for the Interconnection Project to Summer Falls. After a quick review I'm surprised that you are even considering the Proposed transmission Lines - Alternative 1. My residence is XXXXXXXXXXXXX, and the Avista line currently is located between my property and Highway 2. Your proposal would place another line 100' south, which will place it adjacent or over Lewis St., either going through or bordering our property.

I've heard numerous warnings and comments regarding dangers or longterm health issues from nearby or overhead power lines. I'm not an expert or have direct knowledge of the health issues involved, however I do have a strong opinion that this would not be a good addition for this location.

Looking at your proposal, it seems a natural for Alternative 2, primarily going through State or Federal land, versus Private land, and adjacent for the most part to the existing Main Canal.

I'm surprised that Alternative 1 was even considered, and welcome any information you can offer that would validate this type of planning.

Sincerely;
Jim Randall
