Page 9, line 8: The phrase “aluminum results a” needs to be changed to “aluminum results in a.”

Page 16, line 14: The \$11.7 million/year needs to be changed to \$11.9 million/year. Summing the aluminum smelter portion of the 1,440 aMW yields 1,358 aMW. If the maximum amount is purchased by the smelters and they all select the indexed rate the maximum revenue under-recovery amount would be \$11,896,080 for every mill below the forecasted average rate.
