BPA webinar: Utility Potential Calculator Q&A

When: July 7, 2022
Time: 10 – 11 a.m. (PDT)

Presentation and discussion:
BPA is hosting a Q&A session from 10-11 a.m. (PDT), Thursday, July 7, to answer any questions utilities have about our Utility Potential Calculator, or UPC, presented during a webinar on June 16. We encourage utilities to first test out the tool, then join the July 7 webinar with questions.

The tool and user guide are live on this site under the Utility Potential Calculator section:

Background:
The BPA Utility Potential Calculator provides utility staff with an economic way to estimate the energy efficiency potential in their service area, based on a streamlined set of utility-specific inputs. The UPC forecasts energy efficiency potential estimates as well as anticipated costs over a 20-year horizon. User inputs influence the level of energy efficiency potential available and can be adjusted based on a utility’s customer characteristics. UPC outputs highlight the sectors, end uses and measures with the highest energy efficiency potential to inform future utility program and resource planning.

The user guide is a helpful resource that provides background information on the development of the UPC, step-by-step instructions to adapt the calculator to a service area, and general information about the energy efficiency potential estimation process. Additionally, the user guide offers troubleshooting support and helpful tips to best utilize the UPC.
