

Reminder: Performance Tested Comfort Systems sun setting

BPA's Performance Tested Comfort Systems, or PTCS, will be sun setting September 30, 2023, coinciding with the end of the current rate period. A formal IM Change Notice announcement was posted April 1, 2023. Projects must be fully completed, entered into the PTCS Registry and "BPA-approved" by 9/30/23 to be eligible for PTCS incentives (no exceptions – we strongly recommend getting all projects into the system by 9/23/23). Utilities will have their usual 6 months to invoice BPA.

In its 25 year history, the PTCS program has certified hundreds of thousands of Heat Pump installations, trained thousands of contractors and significantly transformed the residential heat pump market in the Pacific Northwest successfully leveraging this energy savings HVAC technology. This is not the end of BPA's heat pump program, it is a turning point needed to address new and evolving market needs and trends. Heat pumps will continue to be an integral part of BPA's strategy in the region to meet aggressive climate and energy policy goals.

For more information, please refer to the [FAQ document](#) and stay tuned for additional announcements.
