BPA webinar: Industrial Adjustable Speed Drives market insights and savings

On Aug. 18 from 10-11 a.m. (PDT), BPA's market research team will present regional market and energy consumption trends related to standalone pumps and fans serving the industrial sector. In particular, the team will speak to the adoption of adjustable speed drives on industrial pumps and fans, and how much energy savings this type of control device has brought the region over the past six years. The presentation will cover insights specific to different industries, how regional utility programs have impacted the market and the future energy efficiency opportunities for this market. We encourage utility staff working in the industrial sector to attend this webinar... [More](#)
