# Connected Thermostats Qualified Products List

Applicable to: BPA Commercial Connected Thermostat Retrofits  
Effective: October 1, 2021 to September 30, 2023  
Product list last updated: June 7, 2022

The product list is periodically updated to reflect newly qualified models. For more information, or to request that products be added to the list, please visit BPA’s Trade Ally Network NW website at [tradeallynetworknw.com](http://tradeallynetworknw.com). All product additions are reviewed and accepted by Bonneville Power Administration prior to publication on the product list.

Effective: October 1, 2021 to September 30, 2023
Product list last updated: June 7, 2022

A built-up building automation system may include features or functionality similar to a connected thermostat, and examples of these types of products are listed below for reference. While these products are not eligible for a connected thermostat incentive, they may be eligible for custom incentives.

Connected thermostats save energy by controlling HVAC usage in single-zone HVAC systems. These thermostats connect to the internet and have features that include online alerts, monitoring and programming and/or control. Energy savings are associated with reduced heating and scheduled temperature setbacks and setting the fan to auto mode during unoccupied hours.

Although the thermostat capabilities are an important part of realizing energy savings, correct programming and subsequent verification of these features help ensure persistence of energy savings.

While a connected thermostat product may include additional features, qualified connected thermostat products are defined as meeting all of the following specifications:
- Capable of being connected to the web
- Support multiple temperature setback schedules
- Support fan-mode scheduling (continuous on vs. auto-mode)
- Support limited duration overrides (i.e. reverts to programming after 24 hours)
- Automatically restore programmed settings after power outage
- Supports multiple cooling stages

Products that do not qualify for a connected thermostat incentive may still be considered for incentives under the custom analysis path.
