

Grand Coulee Maintenance HQ

This project entails the construction of a new Maintenance Headquarters facility at Grand Coulee Dam. The initiative also addresses needs at other facilities, including improvements to existing outdated structures. This comprehensive approach ensures that staff, vehicles, and materials can be relocated effectively.

The primary goals of this undertaking are to invest in the well-being and safety of personnel, maintain reliable system operations, and enhance the condition of all acquired facilities. Key activities include providing a purpose-built facility with vehicle storage, completing capital improvements such as abatement and security fencing, and implementing labor-saving measures to prevent operational downtime.
