Example 1: Calibrated Net Revenue Calculations

Calibrations and Calibrated Net Revenue are calculated separately for each business line. When this Example uses the term “net revenue,” it is referring to net revenue for a business line. When it uses the term “financial reserves,” it is referring to financial reserves available for risk attributed to that same business line.

The Net Revenue (NR) Calibration is the sum of the amounts of each NR Calibration Event for a business line. A NR Calibration Event is a financial event not forecast in the BP-20 rate case that (1) impacts net revenue differently than it impacts financial reserves, and (2) results in a difference between the amounts of such impacts that is greater than \$5 million (positive or negative). Such events may include, but are not limited to, debt management transactions, contract settlements, and changes in non-cash expenses. The amount of a NR Calibration Event will be calculated as (1) the impact of the event on financial reserves, minus (2) the impact of the event on net revenue. The following is a non-exhaustive list of examples:

A decrease in Federal asset depreciation of \$X: this change reduces depreciation expense and therefore increases net revenue by \$X. Depreciation is a non-cash expense. As such, changes in depreciation have an impact of \$0 on financial reserves. Subtracting \$X from \$0 yields -\$X. This is the amount to be added to net revenue (as part of the CNR calculation).

Cashing out a contract for several years of a product: a Business Line had previously contracted to sell a product to a counterparty for 10 years at \$Z per year starting in FY 18; the counterparty offers to pay the Business Line up front for the 10 years' of product at BPA's discount rate; the total cash paid in FY 18 is \$8Z. In FY 18, there is no impact of the cash-out on net revenue. The impact on financial reserves is an increase from \$Z to \$8Z, or \$7Z. Therefore, the FY 18 Net Revenue Calibration due to this transaction is \$0 subtracted from \$7Z, or +\$7Z.

In FY 19, net revenue remains unaffected by the cash-out; revenue from the contract for the year is still \$Z. However, in FY 19, there is no cash received for the sale; the change in FY 19 cash flow is -\$Z. Therefore, the FY 19 Net Revenue Calibration due to this transaction is \$0 subtracted from -\$Z, or -\$Z.
