# **Customer-Led Workshop for BPA Grid Access Transformation Project**

#### NITS Customer Group Presentation September 10, 2025

Chris Jones
Director of Transmission Policy and Power Delivery
Northwest Requirements Utilities

### **NITS Customer Viewpoint**

- Over the previous 16 months, the NITS customer group has presented its transmission perspective four times (May 2024, August 2024, May 2025, and now today)
- While BPA has provided additional information for its planning proposals throughout this period, NITS customer objectives remain largely unchanged
  - BPA must provide for an effective planning process to accommodate a range of NITS customer needs – meeting forecasted load growth (both traditional and larger, discrete loads) as well as forecasted resources (both from federal and non-federal resources) on a timely basis
- Regional and preference customer decision points are quickly approaching
  - WRAP Binding Phase elections, Provider of Choice contract execution, decisions regarding Tier 2 power supply resources
- Timely implementation of the GAT Project is fundamental to BPA meeting its tariff and statutory obligations to its transmission customers

#### NITS Customer Viewpoint, cont.

#### BPA's Transition Phase Proposals

- New Network Load and Line/Load Interconnection Reforms
- Readiness Criteria (including NWH/Virtual Points)
- Long-term Firm Queue Management
- Interim Service/Enhanced 6NN Service for NITS customers

## **Moving Forward**

- BPA's planning obligation to its NITS customers endures, despite this multi-year pause
- Moving the GAT transition phase elements to a 212 process increases the urgency to implement transparent, durable solutions for all customers
- Efficiency will be critical
  - Accelerate proposals that receive meaningful consensus
  - Allow appropriate time and space to engage on proposals that lack clarity or meaningful support
- We must not lose sight of anticipated benefits of Proactive Planning and Accelerated Expansion elements

# **QUESTIONS?**
