BPA Attachment K Planning Process

Planning Meeting II

November 19, 2020
Agenda

• Introductions
• Attachment K Planning Cycle – 2020
• Attachment K Website
• Economic Study Requests
• Draft Plans of Service for Transmission
• Project Updates
  – Significant Energized Projects
  – Significant Planned Projects
• Next Steps
Attachment K Planning Cycle - 2020

• Customer Meeting I  April 14, 2020
  – 2019 Transmission Plan
  – Planning Assumptions, Criteria, Methodology
  – Economic Study

• Posting I  August 2020
  – Summary of 2020 System Assessment Results and Conceptual Solutions

• Customer Meeting II  November 19, 2020
  – Draft Plans of Service and Costs
  – Economic Study Requests

• Posting II  December 2020
  – Draft Transmission Plan for 2020
  – Final Transmission Plan for 2020
# Attachment K Planning Process

Transmission Services conducts system planning meetings in accordance with its Open Access Transmission Tariff. Attachment K. Below are links to past and present information on the Attachment K Planning Process:

- **2020 Planning Cycle**
- **2019 Planning Cycle**
- **2018 Planning Cycle**

## Email Information

To request participation in the Planning Process, send questions, comments, or request copies of reports, complete the [Planning Processes Participation Request](#).

To request an Economic Study, fill out the [Economic Study Request Form](#).

2020 Planning Cycle

Transmission Services conducts system planning meetings in accordance with its Open Access Transmission Tariff Attachment K. These meetings provide customers and interested parties the opportunity to discuss and provide input to the studies and development of the plans of service.

This page provides information about the Transmission Services Attachment K process including notifications of meetings, results of planning studies, plans of service and other reference information. To request participation in the Planning Process, complete and email the Participation Request Form.

Economic Study Requests

• What is an Economic Study?
  – Studies may be requested to address congestion issues or the integration of new resources and loads.

• How areRequests for Economic Studies submitted?
  PlanningEconomicStudyRequest@bpa.gov

• Requests may be submitted any time…
  Requests submitted after October 31 will be considered in the next prioritization process.

• BPA will complete up to two Economic Studies per year at its own expense.

• There were no Economic Study Requests received during the study cycle which closed on October 31, 2020.
CFR Customers – New for 2020

BPA is providing contracted Transmission Planning services for the following NT customers who have Coordinated Functional Registrations (CFR) with NERC.

- Klickitat County PUD
- Lewis County PUD
- Northern Wasco County PUD
- Pend Oreille PUD
- Umatilla Electric Cooperative
- Whatcom PUD
Draft Plans of Service (2020 Planning Cycle)

• Most of the draft plans of service on the following slides, have been developed to maintain compliance with the applicable planning reliability standards and criteria

• The following standards and criteria were applied in development of the proposed corrective action plans:
  – NERC Reliability Standard TPL-001-4
    (North American Electric Reliability Corporation)
  – WECC Reliability Criteria TPL-001-WECC-CRT-3.2
    (Western Electricity Coordinating Council)

• The remaining plans of service provide needed equipment upgrades or improve Operational or Maintenance Flexibility
• BPA’s 2020 System Assessment for the load areas was based on current studies and did not rely on past studies
• The transmission system was divided into 27 load service areas and 18 paths/interties
• There were six corrective action plans (plans of service) identified from the 2020 System Assessment
• Several of the projects identified from previous System Assessments have updated schedules
• These updates are shown on the following slides

**Bold text** indicates a schedule or status change compared with last year’s update.
## Draft Plans of Service
from the 2020 System Assessment

### Portland Area

Project Updates

Raver to Paul

Project
St. Clair-South Tacoma 230 kV Disconnect Switch Upgrade

Schedule
2022

Puget Sound to Canada Path

Project
Monroe 500 kV Line Re-terminations

Schedule
2021

West of Cascades North (WOCN) Path

Project
Schultz-Raver 500 kV No. 3 and No. 4 Series Capacitors

Schedule
Beyond 2029
Significant **Energized Projects**

**South Tacoma-St Clair 230 kV Line**

**Description**
This project re-sagged the limiting spans of the South Tacoma-St.Clair 230 kV line from 80 deg C MOT to 100 deg C MOT. This increased the line’s capacity by approximately 200 A.

**Energization**
The project was energized in November 2019.

**Project Cost**
The project cost was $260,000.
Significant Planned Projects

Tri-Cities Reinforcements

Description
The Tri-Cities Reinforcements consists of the following projects:

- McNary-Paterson Tap 115 kV Line
- Richland-Stevens Drive 115 kV Line
- South Tri-Cities Reinforcement

McNary-Paterson Tap – This project adds a new 115-kV breaker at McNary and a new McNary-Patterson Tap 115 kV line (approximately 2-miles).

Richland-Stevens Drive 115 kV Line – This project constructs a new 115 kV line from Richland to Stevens Drive switching station (approximately 3 miles).

South Tri-Cities Reinforcement - This project reinforces the South Tri-Cities Area to address near-term operations and maintenance issues as well as planning reliability issues in the Tri-Cities area, Washington. The area is compliant with planning standards for the loss of any single element. However, loss of two sources to the area may result in substantial loss of load. This hinders the ability to take any transmission facilities in the area out for maintenance since plans must be in place to address the potential loss of a second element.
Significant Planned Projects

Tri-Cities Reinforcements – continued

Description
For the South Tri-Cities Reinforcement, the preferred plan of service is to build a new Tumbleweed Substation (formerly East Roza) and tap the Ashe-Slatt No.1 500 kV line creating a three-terminal Ashe-Tumbleweed-Slatt No.1 500 kV Line. A new 500/115 kV transformer at Tumbleweed Substation will connect approximately 6 miles of 115 kV line to Red Mountain substation.

Estimated Cost and Schedule
The Tri-Cities Reinforcements are presently in the scoping phase. The estimated project cost and schedule will be refined as the project progresses through scoping.
Significant Planned Projects
South Tri-Cities Reinforcement
Significant Planned Projects

Schultz-Wautoma Series Capacitors

Description
This project is necessary to increase South of Allston (SOA) available transfer capability and improve operations and maintenance flexibility for SOA and I-5 corridor paths. The project will add a series capacitor on the Schultz-Wautoma 500 kV line at Wautoma Substation.

Expected Energization
2022

Estimated Cost
$30,000,000
Significant Planned Projects

Schultz-Wautoma Series Capacitors
Significant Planned Projects

Monroe 500 kV Line Re-terminations

**Description**
This project increases reliability and operational flexibility in the Puget Sound area. This project adds a new 500 kV bay at Monroe Substation and re-terminates the following 500 kV lines at Monroe: the Chief Jo-Monroe line into bay 5 and the Custer-Monroe No.2 line into bay 4. This essentially reconfigures Monroe into a double-breaker, double-bus layout for improved reliability.

**Expected Energization**
2021

**Estimated Cost**
The estimated project cost is $10,800,000
Significant Planned Projects

Monroe 500 kV Line Re-terminations
Significant Planned Projects

Buckley GIS Replacement

Description
This project is required to replace the Buckley 500 kV Gas Insulated Substation (GIS) with an Air Insulated Substation (AIS). The Buckley GIS has outlived its useful life and will run out of the necessary spare parts to continue its operation in the next 5 years. The long range plan for Buckley is to develop an AIS Substation with three 500 kV bays in a double breaker double bus configuration for the Buckley-Marion, Slatt-Buckley, and Buckley-Grizzly 500 kV lines.

Estimated Cost and Schedule
This project is under development and will be completed in the longer term planning horizon. The project is presently in the scoping phase. The estimated project cost and schedule will be refined as the project progresses through scoping.
Significant Planned Projects

Buckley GIS Replacement
Next Steps

• **Update the BPA Transmission Plan** based on the 2020 planning cycle and post by the end of December, 2020.

• **Jan.1, 2021 – Begin 2021 Attachment K Planning Cycle**

*Sign up to participate in future meetings or receive additional information by:*

*Filling out the Participation Request form on BPA’s Planning Process website and sending it via e-mail to:*

*PlanningParticipationRequest@bpa.gov*
