webSmartOASIS Dynamic Notifications

webSmartOASIS Release 3.13 introduced a new customer notification functionality called Dynamic Notification.

- It is on the customer level (not an individual user).
- Replaces these current notifications (available now):
 - TSR Updates: Status changes on PTP and NT TSRs for both Customers and Sellers.
 - Security Limits: So-called “soft” limits set on reservations.
- Adds new notifications (to be covered in future CBPI calls):
 - Preemption
 - Renewal deadline
 - NITS

New Notification Interface

- The new Dynamic Notifications are found in OASIS under menu: Admin -> Notification.
- The current notifications are replaced by Notification Event types: PTP_CUSTOMER, PTP_SELLER, SECURITY_LIMITS.

Notification

Expand/Collapse	Company Code	Notification Event	Notification Method	Notification Address	Notifi
+	ZPSE	PTP_SELLER	mailto:	razerfing@bpa.gov	CSV

Lead Days:

Notification Event Types – Replaces Current

- PTP_CUSTOMER - E-mail notification on any new or updated PTP or NT request/reservation where the registered company is identified as the CUSTOMER_CODE.
 - *This is in addition to any notification issued based on the Mailto: URL supplied in the STATUS_NOTIFICATION field on the TSR itself.*
 - *This is used for NT TSRs as well until NITS Phase 2.*
- PTP_SELLER - E-mail notification on any new or updated PTP request/reservation where the registered company is identified as the SELLER_CODE.
- SECURITY_LIMITS – E-mail notification regarding the reservation reduction types of RELOAD, INTERRUPTION, and RELIABILITY. This is an OATI specific implementation feature and not found in the NAESB standard.

Notification Event Types - New

- PREEMPTION – Will replace the existing PCM notifications in 2023.
- PTP_RENEWAL – Used to notify customers of approaching Renewal date. Will be rolled out in early 2023.
- NITS – Will be rolled out as part of NITS Phase 2.
- AS_SELLER – Will not be used at BPAT.

Existing Notification (Company Summary)

The notification configurations on the Company Summary were removed from the display. Existing company notification configurations were converted to the corresponding Notification Event Type subscription as follows:

- Current Notification configuration was transferred to PTP_CUSTOMER.
- Current Seller Notification configuration was transferred to PTP_SELLER.
- Current Security Limits notification was transferred to SECURITY_LIMITS.

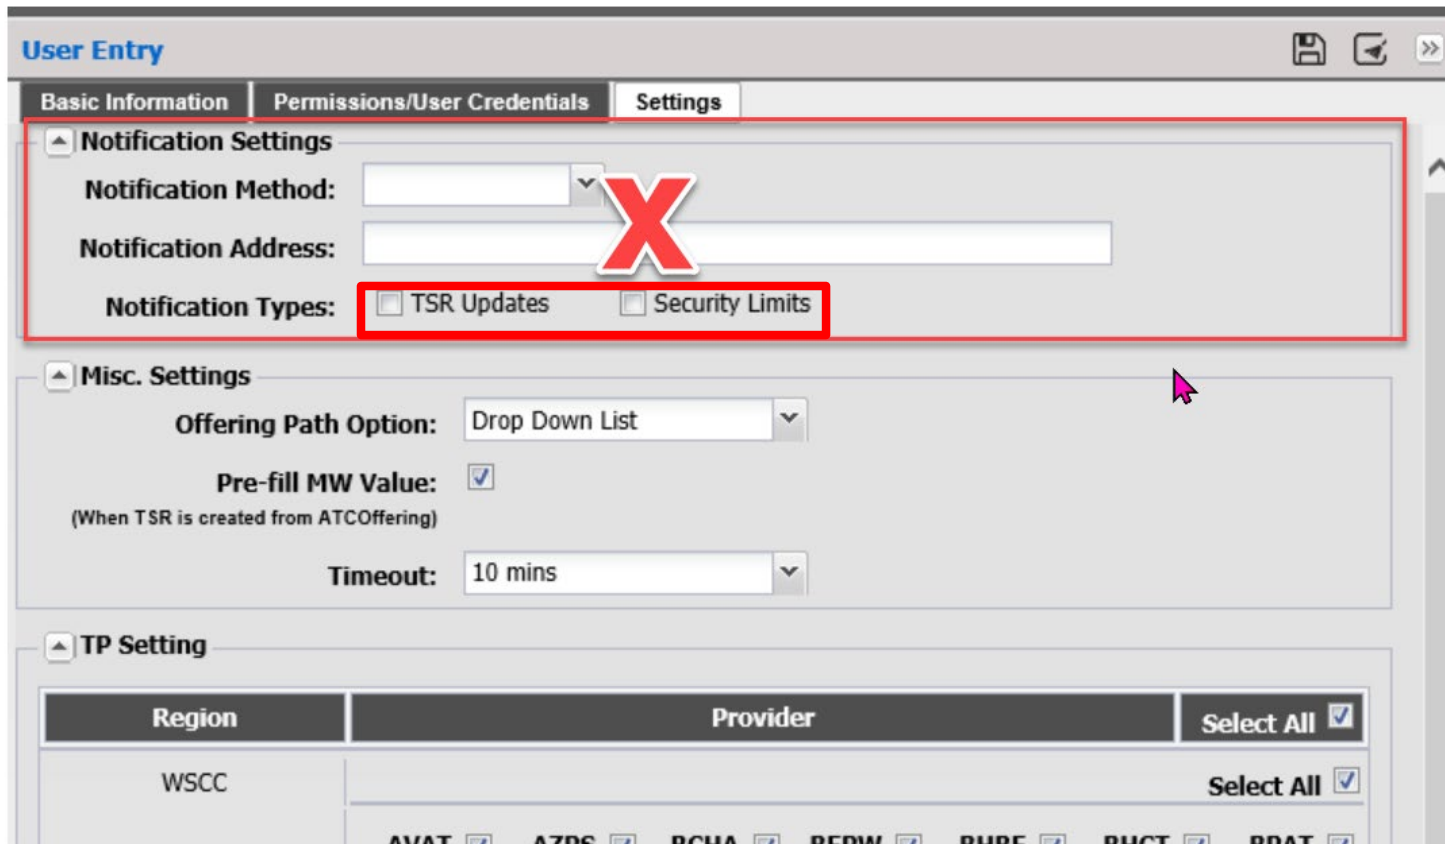

The screenshot shows a configuration form with the following fields and options:

- Require Comments:
- Allow Fractional MW:
- Allow TSR with Null Path:
- Recall Customer List: ALL (dropdown menu)
- Notification Method: E-MAIL S&CP E-MAIL Revised E-MAIL Tabular HTTP HTTPS
- Notification URL:
- Notification Method: E-MAIL S&CP E-MAIL Revised E-MAIL Tabular HTTP HTTPS
- Seller Notification URL:
- Notification Types: TSR Updates Security Limits

A large red 'X' is overlaid on the form, specifically covering the Notification Method and Seller Notification URL fields. A mouse cursor is visible over the first Notification Method field.

Existing Notification (User Entry)

The notification configuration on the User Entry was removed from the display. Any user notification configuration was not converted to Notification Event Type subscriptions.
