RE: Bonneville's NITS Access to Transmission Capacity Workshop

Powerex appreciates the opportunity to provide comments regarding Bonneville's NITS Access to Transmission Capacity – Initial Alternatives Meeting held on March 7<sup>th</sup>, 2025. Powerex appreciates the stakeholder outreach and provides the following feedback for Bonneville's consideration.

Powerex understands from the meeting that Bonneville is considering possible near-term and longer-term alternatives to meet Network Integration Transmission Service (NITS) customers' needs. Regarding the near-term alternatives, Powerex suggests that Bonneville hold additional workshops where further information and possible examples could be provided to customers. More specifically, Powerex would appreciate Bonneville providing additional details on how bypassing of Available Transfer Capability (ATC) checks for Monthly NITS requests will function in comparison to Monthly Point-to-Point (PTP) requests, and how the limitation of renewal rights would be structured for new PTP or existing Conditional Firm Service? Powerex also requests that Bonneville confirm that the near-term and longer-term alternatives would not affect existing Long-Term Firm (LTF) PTP rights.

Powerex appreciates Bonneville staff taking the time to hold stakeholder workshops and addressing clarifications and questions on this important topic

Sincerely,

Raj Hundal  
Director, Market Policy and Practices
