2021 Oversupply Management

September 29, 2021
2021 OMP Summary

- The Jan-Jul water volume for 2021 was 82.2 MAF vs 2019 which was 101.6 MAF. Typically, the Jan-Jul water volume average is 103.3 MAF.

- In 2021, no OMP events occurred. As a result, no generators were displaced and no displacement costs were paid or recovered nor were any loss waivers executed.

- BPA hosted the annual JOC meeting on February 16, 2021.

- Generators met the annual deadline, established in BPA’s OATT under Attachment P, to submit displacement costs to the independent evaluator.

- The OMP Annual System Test was successfully implemented the week of March 22nd proving systems were operational.
Comparison of Water Years

- 2021 was characterized by below average snow pack in the US portion of the basin suppressing flows until late spring.
- Several spikes occurred with some record warm temperatures which occurred basin wide.
- 2021 seasonal volume was significantly below average and reminiscent of the very low volumes experienced several times in the early 2000’s in the basin.
