Increase use of PTCS

Future of Consumer Products

Quick Update

Residential Lighting

The RTF significantly cut residential lighting savings and measures in fall 2019. **BPA did not implement these changes in the current IM due to the timing.**

In Sept. 2020, the RTF recognized that federal 45 lumen/backstop (EISA) is not getting implemented, but Washington is implementing it on its own.

BPA is analyzing the impact of this on a measure-by-measure level; however, generally we will see a very significant reduction of measures and savings in Washington and less reduction in other states.

Energy Saver Kits will also be impacted.

The next IM will include one set of measures for utilities in Washington and a second set for utilities in all other states.

PTCS and Commissioning, Controls and Sizing

We are working with the RTF on their update to the PTCS Heat Pump and CC&S specifications.

Energy savings and payments are likely to be impacted.

It is possible the RTF specification will be **less stringent** than the specification developed through the 2019 PTCS Redesign process. If so, **we will reconvene the PTCS Redesign Workgroup** and seek input on whether to make optional any components the RTF may remove.

Heat Pump Water Heaters

We will be focusing on achieving the Power Plan targets for heat pump water heaters next year.

BPA is not looking at a retail approach at this time because the cost of program implementation currently exceeds the value of the energy savings. If this changes, we will reconsider.

We are considering a two-year approach to provide SPIFs directly to contractors for installing heat pump water heaters in existing homes. If we proceed, we will determine where to offer SPIFs through the Comfort Ready Home utility program plans, and begin offering them in summer 2021. This would not impact utility EEI payments.

We will be coordinating activities closely with NEEA.

Ductless Heat Pumps

We are working hard to save the Residential ductless heat pump measure but **there will be changes to the specification.**

We will simultaneously **reduce reporting paperwork** and **align** more closely with the Commercial measures.

The next Rate Period will be a bridge to the long-term measure, which will likely include a focus on **cold-climate performance** and a **new testing protocol**. We will work with contractors and distributors to ensure they know our long-term plans.

We are working with **NEEA** on next steps for **Going Ductless**.

We will hold a **webinar** when we have the draft specification for input on whether it is feasible.
