

Lighting Calculator 3.3 Has Risen To The Top!

The Lighting Team trimmed the fat and 3.3 stands alone

BPA's Commercial Lighting Team is pleased to announce that as of April 1st, 2015, Lighting Calculator 3.3 will be the only lighting calculator left standing.

By utility request, Lighting Calculator 3.2 is being cut and the innovative 3.3 will be promoted to the sole lighting tool! 3.3 is expected to remain the one and only calculator in town until a more powerful online/mobile friendly version becomes available. Its promotion is attributed to its superior performance and versatility, carrying all the strengths of previous lighting calculators with improved features.

- There are no changes to incentive levels in 3.3, so there is no reason to delay making the switch.
- The BPA Lighting team is available to help with customization and support.
- Trade allies and utilities have been instrumental in providing feedback and support to make 3.3 the best lighting calculator yet.

Remember, the last day to submit projects with LC 3.2 is 3/31/2015
