**Subject:** RE: BP-16 Transmission Rate Case and Segmentation Workshop

This is a question related to the meeting materials posted for the May 7th Segmentation Workshop. On Page 8 of the Segmentation Presentation, BPA provides a \$34.53 million revenue requirement for service over radial facilities. In supporting work papers, BPA also specifies the facilities that comprise radial service and attributes some of the facilities to an abbreviated customer name. With this information, can BPA identify which rate schedules (e.g., NT, PTP) are associated with the radial facilities and can BPA provide an allocation of the \$34.53 million between rate schedules on this basis?

Thank you for your consideration,
