Bonneville Power Administration’s

Power Function Review

Depreciation and Amortization, Federal Net Interest, Non-Federal Debt Service, and Related Debt Management Actions

Management Discussion Group

March 17, 2005
BPA’s Financial Disclosure Information

1. All FY 05-09 information was released externally in February 2005 and may not be found verbatim in Agency Financial Information releases but is provided for discussion or exploratory purposes only as projections of program activity levels, etc.

2. All FY 97-04 information was released externally in February 2005 and is consistent with audited actuals that contain Agency Financial Information.

3. The FY 05-09 net interest expense information is a derived estimate for presentation purposes and may not be found in Agency Financial Information releases but is provided for discussion or exploratory purposes only as projections of program activity levels, etc. Such information should be used only for the purpose for which it was provided and should not be recommunicated by the recipient without the foregoing qualification.

NOTE: When referring to “actuals” for the 2002-2006 rate period, it is a combination of actual results for FY 02-04 and the current forecasts for FY 05-06.
Agenda for Today

- Setting the Stage
- Depreciation and Amortization
- Federal Net Interest Expense
- Non-Federal Debt Service and Debt Management Actions
- Summary
What are the programs to be discussed?

Actually, these “programs” are really categories of expenses derived from several programs.

1. **Depreciation & Amortization**: These categories consist of the annual expenses associated with FCRPS plant-in-service and intangible assets, respectively.

2. **Federal Net Interest Expense**: This category consists of the interest on outstanding bonds and appropriations, an interest credit, amortization of capitalized call premiums, the capitalization adjustment, and the allowance for funds used during construction.

3. **Non-Federal Debt Service**: This category consists of third-party debt service or payment costs associated with capitalized contracts and other long-term, fixed contractual obligations. Debt service costs on the Energy Northwest projects (WNP-1, Columbia Generating Station, and WNP-3) make up the majority of these costs.
Executive Summary

- Approximately 40 percent of PBL’s total expenses are Depreciation & Amortization, Federal Net Interest Expense, and Non-Federal Debt Service.

- The forecast of FY05 – FY09 capital levels, debt management activities and depreciation & amortization impacts the FY07 – FY09 period to a much lesser degree than the historical component; the main driver for this period is the level of obligations acquired prior to 2005.

- Debt management activities of recent years have contributed somewhat to the forecasted non-Federal debt service levels in FY07 – FY09, but will impact the levels more significantly in later rate periods.

- There are potential decisions are could decrease the FY07 – FY09 costs. In some cases those decreases may increase risk or defer costs into a later rate period. Decreases to forecasted capital spending levels and financing decisions are examples.
Depreciation & Amortization

Average Annual Expenses for FY 07-09

Federal Net Interest
$235 M

Non-Federal Debt Service
$565 M

• Depreciation and amortization are the annual expenses associated with FCRPS plant-in-service and intangible assets (ones that are not part of the FCRPS, such as conservation and F&W direct program investments), respectively. These non-cash expenses are the systematic distribution of the original cost of the assets over their estimated useful lives.

• The primary driver for these expenses is the level of capital investment.

Program Components of $201M/year average annual expense for FY07-09:

52% COE/USBR – investment in power portion of hydro projects, including Columbia River Fish Mitigation (CRFM) and Lower Snake hatcheries

7% PBL - investment in capital equipment (IT and furniture), including share of Corporate

11% F&W - investment in BPA’s Fish and Wildlife direct program

15% Legacy Conservation – investments in BPA’s original conservation capital program, 1982-1999

15% ConAug – investments in BPA ‘s conservation capital program during Subscription contract period, 2002-2011

See Financial Disclosure Statements on Page 2
Drivers of Change, FY 05-09

- CRFM plant-in-service schedule, which previously was heavily weighted to a 2001 in-service date, has been more spread out over the 2003 – 2014 period.

- Consistent on-going levels of annual capital expenditures for Fish & Wildlife, Conservation Augmentation, Direct Funding and Capital Equipment programs

- Legacy conservation amortization has been declining as investments are fully amortized

Plant-in-Service and Intangible Asset Investments, actual data and current forecasts:

Risks & Opportunities:

- Since depreciation and amortization are direct results of the level of capital investment, they will increase or decrease based on capital investment decisions.

- Uncertainty surrounding CRFM plant-in-service schedule (FY04 CWIP at $529 M)

Non-Federal Debt Service

$565 M

See Financial Disclosure Statements on Page 2
Components of Federal Net Interest Expense

The components of Net Interest Expense are:

1. **Interest on outstanding bonds and appropriations.** For PBL, bonds issued to the U.S. Treasury by BPA are for capital equipment, F&W, conservation and the direct-funding of COE and USBR investments. Congressional appropriations are for the power portion of COE and USBR hydro projects, including F&W.

2. **Interest credit.** A significant variable is an interest credit associated with interest income from cash in the BPA Fund attributable to PBL cash flows.

3. **Amortization of certain cash events.** These include the non-cash expenses for amortization of capitalized bond premiums and the capitalization adjustment resulting from the BPA Appropriations Refinancing Act.

4. **Allowance For Funds Used During Construction (AFUDC).** This is included to offset bond interest used to fund assets under construction.

2006 – 2009 do not include interest income on average annual cash balances.

Risks:
- Rising interest rates, affecting the cost of future Treasury borrowing
- Changes in the plant-in-service schedule of the Columbia River Fish Mitigation project by the Corps of Engineers
- Reduced cash balances, decreasing interest credit

Opportunities for Reductions:
- Continued aggressive debt management to reduce interest costs
- Continuation of the Debt Optimization Program
- Lower interest rates
- Increased cash balances, increasing interest credit

See Financial Disclosure Statements on Page 2
Capital Funding Mechanisms

BPA currently funds capital investments in two ways:

1. Bonds Issued to Treasury
2. Capital Appropriations

Bonds Issued to Treasury

- Bonds issued to Treasury represents debt issued by Bonneville to the US Treasury since the late 1970’s to finance BPA investments in transmission, fish & wildlife, and conservation, and in direct-funded Corps & Bureau investments.

- Bonds outstanding are limited by law to $4.45 billion. Interest rates are set at prevailing government agency rates.

- BPA draws on the BPA Fund for the capital expenditures and issues bonds to Treasury to replenish the Fund. The term of the bonds is not to exceed the associated average service life. Interest is paid semi-annually on the bonds and the principal is paid at the end of the term. Callable bonds may be issued and can be called (paid early), but BPA must then pay a premium.
Capital Funding Mechanisms (Continued)

Capital Appropriations

- Appropriations represent funding from annual Congressional appropriations for Corps and Bureau capital investments in hydro related facilities, including fish recovery measures. With passage of the 1996 BPA Appropriations Refinancing Act, interest rates are at Treasury’s prevailing market rates, without mark-up.

- This specifically includes Corps of Engineers’ investment in the Columbia River Fish Mitigation (CRFM) project. The Corps receives appropriated funds and uses them for construction. Once a project is complete, it is transferred to plant-in-service. It is at this point that the power portion becomes BPA’s obligation to repay to Treasury. These obligations must be paid within 50 years.
Drivers of Change, FY 07-09

- Debt Optimization Program increases the repayment of Federal obligations, both bonds and appropriations, thereby reducing interest expense
- Increased capital investment for Conservation Augmentation, PBL/Corporate Information Technology, Fish & Wildlife and Direct Funding programs for the Corps and Bureau
- CRFM plant-in-service schedule pushed out from original 2001 in-service date

Interest on post 2004 incremental obligations: 7,171 21,664 47,142 75,520 100,820

See Financial Disclosure Statements on Page 2
Actual and Forecasted Federal Net Interest Expense
($ millions)

Explanation for the delta during 2002-2006:
Actuals reflect:
• Low interest rate environment
• Issuance of short-term Treasury bonds in support of Debt Optimization
• Early amortization of Federal debt due to Debt Optimization
Rate case assumed large amount of Columbia River Fish Mitigation plant-in-service in FY01, which did not occur.

See Financial Disclosure Statements on Page 2
Non-Federal Debt Service

Average Expenses for FY 07-09

- Federal Net Interest: $235M
- Depreciation/Amortization: $201M
- Non-Federal Debt Service: $565M

See Financial Disclosure Statements on Page 2
Non-Federal Debt Service Forecast
FY 07 – FY09

What is non-Federal debt service?

- It consists of third-party debt service or payment costs associated with capitalized contracts and other long-term, fixed contractual obligations.

- The major component in this category is Energy Northwest (EN) debt service, which has never been level. Over the years it has been shaped through debt management actions to minimize the revenue requirement for the benefit of ratepayers.

- Recent debt management actions from FY 2000 – 2004 have created varying effects, both positive and negative, on non-federal debt service. These include:
  - Debt Optimization
  - EN Debt Service Reserve Fund Free-ups
  - Refinancings for Savings
  - New money financing at EN

</tr>
</tbody>
</table>

To date, prepayment of Federal obligations due to Debt Optimization has been approximately $1B.

- Of that amount, $525M has been applied toward Federal bonds, directly restoring Treasury borrowing authority.
- The other half was applied to Federal appropriations, which does not immediately restore borrowing authority, but creates opportunities for restoration in future years.
Understanding the Debt Optimization Impact on the FY07 – FY09 Forecast

Only Debt Optimization that has been completed to date is included in and has an impact on the current forecast.

How does it impact the forecast?

  **FY07 - FY09 impact:** zero.

- Interest impact from new EN bonds: Additional semi-annual interest expense on the new EN bonds that were placed in the 2013 – 2018 period is part of the EN debt service expense in each year from 2005 – 2018.

  **FY07 - FY09 impact:** EN interest expense is higher in the ’07 – ’09 period than it otherwise would have been. However, the decrease to Federal Net Interest Expense offsets this increase.
$287M of reserve funds that otherwise would have freed up between FY 2003 and FY 2018 were freed up between FY00 and FY04. Of this, $238M was used in FY02-04 to lower EN debt service expenses, reducing the SN CRACs and SLICE True-up.

If the debt service reserve fund free-ups had not been released early, the balance would have generated interest earnings throughout the FY07 - FY09 rate period.

Total impact in FY07 - FY09 will be about $49M (about $19M due to free-ups no longer available and about $30M due to lost interest on reserve funds).

See Financial Disclosure Statements on Page 2
Debt Management Actions – Refinancing for Savings

What are refinancings for savings?

- BPA Corporate Finance pursues traditional refinancings for interest rate savings when established target thresholds are met by market conditions.
- These “high-to-low” refinancings take advantage of the low interest rate environment.
- Typically the original maturities on the bonds do not change and the principal stays roughly the same, but the interest rate decreases.
- All interest rate savings from these refinancings accrue to PBL.

During FY01 - FY04, 12 EN bond refinancings and three non-EN smaller project refinancings totaling over $3B were completed. Several of these transactions were very complex, combining both traditional refinancings and Debt Optimization. This makes it difficult to segregate out actual savings in the FY07 – FY09 period specifically due to traditional refinancings.
Single Portfolio Debt Management has Created Significant Results

- Between FY00 and FY04, the weighted average interest rate (WAI) on total outstanding liabilities decreased from 6.6% to 5.6%, a 100 basis point (1.0%) reduction, currently saving over $100 million per year in interest expense.

- Even though the amount of long-term liabilities has been relatively constant from FY00 to FY04, just under $13 billion, about one-third of the portfolio has turned over.

- A number of factors have contributed to these results:
  - Low interest rate environment
  - Prepayment of Federal debt due to Debt Optimization
  - Issuance of short-term Treasury bonds
  - Refinancings for savings
Understanding Debt Management Actions – Currently Producing Over $100 Million in Interest Savings

Interest expense below is calculated by multiplying each outstanding principal balance by the weighted average interest rate for that category at the end of FY ’00 and FY ’04.

1/ Does not include irrigation assistance liability of $722 million at zero percent interest ($53.9 of this amount is for Lower Teton, for which the Administrator has no obligation to recover costs). “Liabilities” on this page do not directly relate to “liabilities” as reflected in the Combined Statements of Capitalization and Long-Term Liabilities.

2/ Appropriation amounts exclude appropriations for construction work still in progress (CWIP). 2004 CWIP for appropriations was $669.1.

3/ Lower Snake Fish and Wildlife previously included in Corps of Engineers.

4/ EN Principal ties to EN FY04 Annual Report, Financial Operating Statistics page. The WAI will not match EN's Annual Report because BPA overlays a debt instrument on top of some EN variable rate debt (from Projects 1 and 3). The effect is that approximately $500m of EN variable rate debt is a synthetic fixed rate obligation for BPA, making BPA's WAI on EN debt different than the WAI noted in EN's books.

5/ TBL principal is different from the actual amount issued in bonds due to: 1) premium bonds issued, 2) timing differences, and 3) transactions costs. TBL is assigned the repayment obligation for the 3 items stated above, which equals the additional Federal prepayment made on TBL's behalf.
The existing non-Federal debt is the main driver of the FY07 – FY09 forecast.

Debt management activities, from the first refinancings in the 1980’s through today, have lowered debt service costs for customers and will continue to do so through this rate period.

Single portfolio management the last few years has played a key role in strengthening BPA’s financial health and maintaining high credit ratings.

Freeing up all EN debt service reserve funds early served a valuable purpose in the FY02 - FY04 period but their adverse impacts will be realized from FY05 - FY18.

There are options related to non-Federal debt service that could benefit rate payers in the near term, but could impact future rates.
