Proposed Action: Maple Valley Substation Site Water Supply Replacement

PP&A Project No.: 2086 MPLV

Budget Information: Work Order # 00269175, Task 02

Categorical Exclusion Applied (from Subpart D, 10 C.F.R. Part 1021):
B1.3 Routine maintenance activities and custodial services for buildings, structures, rights-of-way, infrastructures…Routine maintenance activities include, but are not limited to…(e) Plumbing, electrical utility, and telephone service repair…

Location: Renton, King County, Washington
Township 23 North, Range 5 East, Section 20&21

Proposed by: Bonneville Power Administration (BPA)

Description of the Proposed Action: BPA plans to replace the existing Maple Valley Substation site water service line with upgraded, more reliable pipe. The upgraded water line section would be installed on-site from the city meter to the substation control house and SVC building in a trench 3-feet deep and approximately 2500-feet long. All work would occur on existing, previously developed BPA facility property, primarily along the rocked, electrical yard shoulder and service road. The work is scheduled to occur in November-December 2011.

Findings: BPA has determined that the proposed action complies with Section 1021.410 and Appendix B of Subpart D of the Department of Energy’s (DOE) National Environmental Policy Act (NEPA) Regulations (57 FR 15144, Apr. 24, 1992, as amended at 61 FR 36221-36243, July 9, 1996; 61 FR 64608, Dec. 6, 1996). The proposed action does not present any extraordinary circumstances that may affect the significance of the environmental effects of the proposal. The proposal is not connected [40 C.F.R. 1508.25(a)(1)] to other actions with potentially significant impacts, is not related to other proposed actions with cumulatively significant impacts [40 C.F.R. 1508.25(a)(2)], and is not precluded by 40 C.F.R. 1506.1 or 10 C.F.R. 1021.211. Moreover, the proposed action would not (i) threaten a violation of applicable statutory, regulatory, or permit requirements for environment, safety, and health, (ii) require siting and construction or major expansion of waste storage, disposal, recovery, or treatment facilities, (iii) disturb hazardous substances, pollutants, contaminants, or Comprehensive Environmental Response, Compensation and Liability Act-excluded petroleum and natural gas products that pre-exist in the environment such that there would be uncontrolled or unpermitted releases, or (iv) adversely affect environmentally sensitive resources.
BPA has determined that there will be no effect on any listed or proposed threatened or endangered species, or critical habitat under the Endangered Species Act. No floodplains or wetlands will be impacted from the project.

Based on the provisions identified on the attachment, this proposed action meets the requirements for the Categorical Exclusion referenced above. We therefore determine that the proposed action may be categorically excluded from further NEPA review and documentation.

Environmental Provisions  
Environmental Checklist for Categorical Exclusions
ENVIRONMENTAL PROVISIONS

This categorical exclusion will meet the following provisions:

1. In the event any archaeological or historic materials are encountered during project activities, the following actions should be taken:
   - Stop work in the immediate vicinity and immediately notify the BPA environmental project manager and appropriate BPA project staff. A BPA archaeologist, interested Tribes, and the appropriate county, state, federal agencies should also be notified.
   - Implement reasonable measures to protect the discovery site, including any appropriate stabilization or covering.
   - Take reasonable steps to ensure the confidentiality of the discovery site.
   - Take reasonable steps to restrict access to the site of discovery.

2. All standard erosion and sediment control best management practices (BMPs) will be used for any ground disturbances and road improvements to avoid/minimize excessive erosion, soil sloughing, and other surface alterations during the construction phase.

3. Any excess spoils resulting from excavation should be disposed of properly, per BPA’s specifications. Also, all waste/trash generated during construction will be collected, removed, and disposed legally off-site.

4. Immediately notify the KEP environmental lead or regional staff in the event of a spill or release to the environment. Maintain appropriate emergency spill response materials on-site to control unexpected and unanticipated releases of petroleum-based products or other hazardous materials. Have emergency supplies in an easily accessible location and clearly marked. Disposal of any spill material will be in accordance with applicable state and federal requirements.

5. If there are any changes in construction activities that require relocation or change of work parameters, or for sites that have not been previously identified as work sites, construction shall not proceed until the KEP environmental lead can evaluate those changes.
