Appendix A: ASC 980 Analysis for Costs ......................................................................................... 7
1. Purpose & Background

1.1 Purpose

A. Provide guidance on the establishment of regulatory assets and liabilities.

B. Document impacts of discontinuance of this policy as a result of no longer meeting the Accounting Standards Codification (ASC) 980 criteria.

C. Provide guidance on types of eligible and ineligible costs.

1.2 Background

In accordance with ASC Topic 980 – Regulated Operations, certain costs or credits may be included in rates for recovery or refund over a future period and consequentially are recorded as regulatory assets or liabilities in the financial statements. As long as Bonneville Power Administration (BPA) continues to meet the following criteria, the Administrator, in their role as rate regulator, has the ability to create regulatory assets or liabilities through the rate setting process:

A. Rates are subject to approval by an independent, third-party regulator or by a governing board empowered by statute to establish rates that bind customers.

B. The rates are designed to recover the costs of regulated services.

C. It is reasonable to assume that the rates are set at levels that can be charged to and collected from customers.

Section 7(a)(1) of the Northwest Power Act, 16 U.S.C. § 839e(a)(1) empowers the Administrator to establish rates to recover the cost of regulated services and in accordance with sound business principles. Rates established by the Administrator become effective after being reviewed and confirmed by the Federal Energy Regulatory Commission (FERC).

BPA continually evaluates changes in the market, industry, contracts and the organization to affirm that it is meeting the requirements to apply ASC 980 and report regulatory assets and liabilities in the audited financial statements.

2. Policy Owner

BPA’s Chief Financial Officer (CFO) has overall responsibility for this policy and oversees the implementation in collaboration with the Accounting Officer.

3. Applicability

This policy is applicable to Federal Columbia River Power System (FCRPS) financial statements that combine the accounts of BPA, the accounts of the Pacific Northwest generating facilities of the U.S. Army Corps of Engineers and the Bureau of Reclamation, as
well as the operations and maintenance costs of the U.S. Fish and Wildlife Service for the Lower Snake River Compensation Plan facilities and a consolidated special purpose corporation (Northwest Infrastructure Financing Corporation).

4. Terms & Definitions

**Regulatory asset:** A regulatory asset is an incurred expense that the Administrator, in their role as rate regulator, intends to recover from customers through rates in a future period.

**Regulatory liability:** A regulatory liability is an obligation resulting from the Administrator’s decision, in their role as rate regulator, to return current receipts or revenues to customers through rates in a future period.

**Amortization:** The process of systematically allocating a regulatory asset or liability to expense or revenue over time.

**Finance Regulatory Council (FRC):** A cross-agency team whose purpose is to research, analyze, and make recommendations regarding regulatory assets and liabilities based on the principles set forth in this policy. Members of the FRC include multiple groups from Accounting, Finance, Power Rates, Transmission Rates, and Legal. The Charter for this group can be found on the [FRC SharePoint] site.

5. Policy

A. Approved Through Rate Case Process

If the Administrator, through a rate action, acknowledges their intent to recover a current period expense through rates in a future period, a regulatory asset will be established. Likewise, if the Administrator, through a rate action, acknowledges their intent to return current receipts or revenues to customers in a future period, a regulatory liability will be established.

The basis for a regulatory asset or liability is a rate action. Accounting treatment will follow the treatment in the rate case and other rate decision documentation.

B. Cost Deferral Between Rate Cases

In order for a cost to be considered for regulatory accounting treatment between rate cases, it must be an eligible cost as described within this policy and must be approved by the Administrator with a statement of their intent to recover the costs through rates in a future period.

Additional considerations include:

1. Materiality of the expenditure; BPA generally considers expenditures of $5 million or higher as material when considering regulatory deferral. Items less than $5 million would not normally be considered for deferral.
2. Anticipation of the expenditure (i.e. could not have been reasonably forecast in a rate case).

3. Prudency of the deferral and the related use of debt financing, if applicable.

5. See Appendix A to this policy for additional decision criteria.

C. Discontinuance of Policy

If BPA no longer meets the criteria called out in the Purpose & Background section of this policy, BPA would no longer be eligible to apply the guidance in ASC 980. If this occurs, all regulatory assets and liabilities established as the result of the Administrator’s rate action that would not have been established by a non-regulated entity will be written off to expense or revenue immediately.

6. Policy Exceptions

Fish and Wildlife expenditures are subject to a separate capitalization policy. Please see BPA Policy 212-10, Fish and Wildlife Capitalization for more information.

7. Responsibilities

A. The Executive Vice President and Chief Financial Officer (CFO): Delegated the authority by the Administrator to set accounting policies deemed necessary to keep complete and accurate accounts of operations, including all funds expended and received in connection with the acquisition, transmission, and sale of electric energy and other BPA services.

B. Accounting Officer: Establishes accounting policy and provides technical accounting guidance on capitalization policies.

C. Accounting and Reporting Managers:

   a. Provide accounting functional guidance and oversight to BPA’s financial management systems.

   b. Establish BPA and FCRPS accounting requirements and reporting mechanisms in compliance with applicable policies, laws and regulations.

D. All BPA Managers: Establish operational procedures, practices and relevant training to ensure the work results conform to established BPA policies.
8. Standards & Procedures

Prior to pursuing a new regulatory asset or liability in either a rate case proceeding or between rate cases, the FRC should be consulted to ensure the costs are eligible, properly documented and appropriately approved. The FRC will provide a recommendation to the CFO for concurrence before it is brought to the Administrator for approval as BPA’s rate regulator.

8.1 Eligible Costs

Non-recurring and/or unpredicted costs or revenues that are material, specifically identified in a rate decision, and recovered over a period in excess of 1 year should be deferred and treated in financial reporting in the same manner as identified in rates.

Examples of qualifying costs include:

A. Unrealized gains and losses of BPA’s derivative instruments portfolio associated with purchase power and sales contracts

B. Certain settlement and litigation costs

C. Impaired/discontinued capital asset projects

1. Note: for impaired/discontinued capital asset projects, any costs incurred prior to the date of impairment may be considered for regulatory treatment. The Administrator may elect to apply regulatory treatment for the direct costs as well as the associated overheads, indirects, and AFUDC already applied to the project. Any costs after the date on which the regulatory decision is made must be expensed.

8.2 Ineligible Costs

Recurring costs and preliminary costs are not eligible for regulatory asset treatment. Overheads, capital indirects, and allowance for funds used during construction (AFUDC) loadings should not be applied to ongoing costs to which regulatory treatment is applied. BPA’s primary recurring operating and maintenance expenses are also ineligible costs and include items such as purchased power, depreciation and amortization, infrastructure maintenance, interest, and general and administrative costs.

Note: Fish and Wildlife expenditures are recurring costs incurred for assets not owned by BPA. While this would typically lead to the costs being expensed, BPA applies regulatory treatment under a separate policy. Please see BPA Policy 212-10 for more information.
8.3 Amortization/Recovery Period

Regulatory assets will be amortized in the financial accounting records over the recovery period as approved in rates or as determined and approved by the Administrator.

9. Performance & Monitoring

Please see A-123 narratives for compliance with this policy.

10. Authorities & References

B. ASC Topic 980 – Regulated Operations

11. Review

This policy is scheduled for review in February 2026.

12. Revision History

Appendix A: ASC 980 Analysis for Costs

**Decision analysis criteria:** used for determining if a cost should be capitalized or expensed. These factors are considered in determining whether ASC 980 treatment should be pursued for costs occurring between rate periods that would otherwise be expensed. Each decision should be decided on a case-by-case basis; however, these factors provide guidelines to use in the decision making process.

<table>
<thead>
<tr>
<th>FACTORS</th>
<th>ANALYSIS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does FERC have a role in the Administrator’s deferral decision?</td>
<td>BPA’s legal position is that FERC does not play a role in BPA deciding whether or not to defer expenses. FERC’s role is generally limited to confirmation and approval of BPA’s rates based on the standards in the Northwest Power Act.</td>
</tr>
<tr>
<td>Is the cost unusual, unforeseen (i.e. cost could not have been reasonably forecast in a rate case) or is it a recurring cost?</td>
<td>If the cost is unusual and not predictable, greater consideration should be given to pursuing regulatory asset treatment.</td>
</tr>
<tr>
<td>Is the cost material, as defined in the ASC 980 policy?</td>
<td>If the cost is material, greater consideration should be given to pursuing regulatory asset treatment for the cost. The ASC 980 policy provides materiality guidelines to use in this analysis.</td>
</tr>
<tr>
<td>If the cost is a settlement, does it relate to a past event?</td>
<td>The more the settlement relates to a past event, the more consideration should be given to expensing the cost so that future ratepayers do not have to bear the burden of prior year costs. The more an accounting treatment matches costs borne by and benefits received by ratepayers, the more it should be considered.</td>
</tr>
<tr>
<td>If the cost is a settlement, what is the timeline for settlement payout?</td>
<td>If the payout period is extended, more consideration should be given to deferring the costs. If the payout is immediate, more consideration should be given to expensing the cost.</td>
</tr>
<tr>
<td>Does the contract/settlement agreement provide information on whether it should be expensed or capitalized?</td>
<td>The contract settlement should be reviewed to see if it provides insight on whether the costs should be expensed or deferred. In cases where the contract settlement indicates deferral, the settlement should be considered to pursuing regulatory treatment.</td>
</tr>
<tr>
<td>---</td>
<td>---</td>
</tr>
<tr>
<td>What are the rate payer equity considerations? Do the costs have any bearing on intergenerational equity?</td>
<td>Application of regulatory treatment should strive for rate payer equity, in accordance with sound business principles.</td>
</tr>
<tr>
<td>Do the costs have an impact to rate level and stability in terms of rate impact?</td>
<td>The decision to apply regulatory treatment should consider how the accounting treatment would impact rate levels and stability in terms of rate impact. One of BPA’s objectives is to strive for stable rates given BPA’s fixed cost and debt structure. The more an accounting treatment minimizes the frequency of rate changes or the fluctuation of rate levels, the more it should be considered.</td>
</tr>
<tr>
<td>Does the cost provide multi-year benefits?</td>
<td>The more that a cost provides multi-year benefits, the more it should be considered for regulatory asset treatment because it is more likely to provide a matching of costs with benefits.</td>
</tr>
</tbody>
</table>
Decision Tree

1. Is the cost already included in a rate case?
   - Yes: Capitalize as an ASC 980 regulatory asset
   - No: Proceed to the next step.
2. Is the cost material as defined in the ASC 980 Policy?
   - Yes: Proceed to the next step.
   - No: Do other factors warrant capitalization?
3. Is the cost extraordinary, unusual and/or non-recurring?
   - Yes: Per accounting analysis and ASC 980 policy guidelines, recommendation is prepared, shared with the CFO, and then taken to the Administrator.
   - No: Proceed to the next step.
4. Do other factors warrant capitalization?
   - Yes: If needed, prepare letter or other decision document for Administrator signature documenting approval of ASC 980 treatment
   - No: Administrator reviews recommendations and determines if costs are to be included in future rates.
5. If needed, prepare letter or other decision document for Administrator signature documenting approval of ASC 980 treatment
