

Draft provision to be added to the NT contract:

9. OTHER PROVISIONS SPECIFIC TO THIS SERVICE AGREEMENT

(a) **Network Operating Procedures:** The terms and conditions under which the Transmission Customer shall operate its facilities, and the technical and operational matters associated with implementation of Part III of the Tariff are specified in the Transmission Tariff, Attachment G (Network Operating Agreement) and in this section. Unless specified herein, capitalized terms shall refer to terms defined in the Transmission Tariff.

a. **Redispatch To Manage Transmission System Constraints.**

If the Transmission Provider determines that redispatching Network Resources (including reductions in off-system purchases) to relieve an existing or potential transmission system constraint is the most effective way to ensure the reliability of the Transmission System, the Transmission Provider will redispatch Network Resources and the Transmission Provider's resources on a least-cost basis, without regard to ownership of such resources. Redispatch shall be initiated on eligible Network Resources in accordance with procedures in a business practice posted on the Transmission Provider's website.

b. **Network Resources Eligible to be Redispatched by the Transmission Provider.**
