

Interim Service

Conditional Firm Product Options

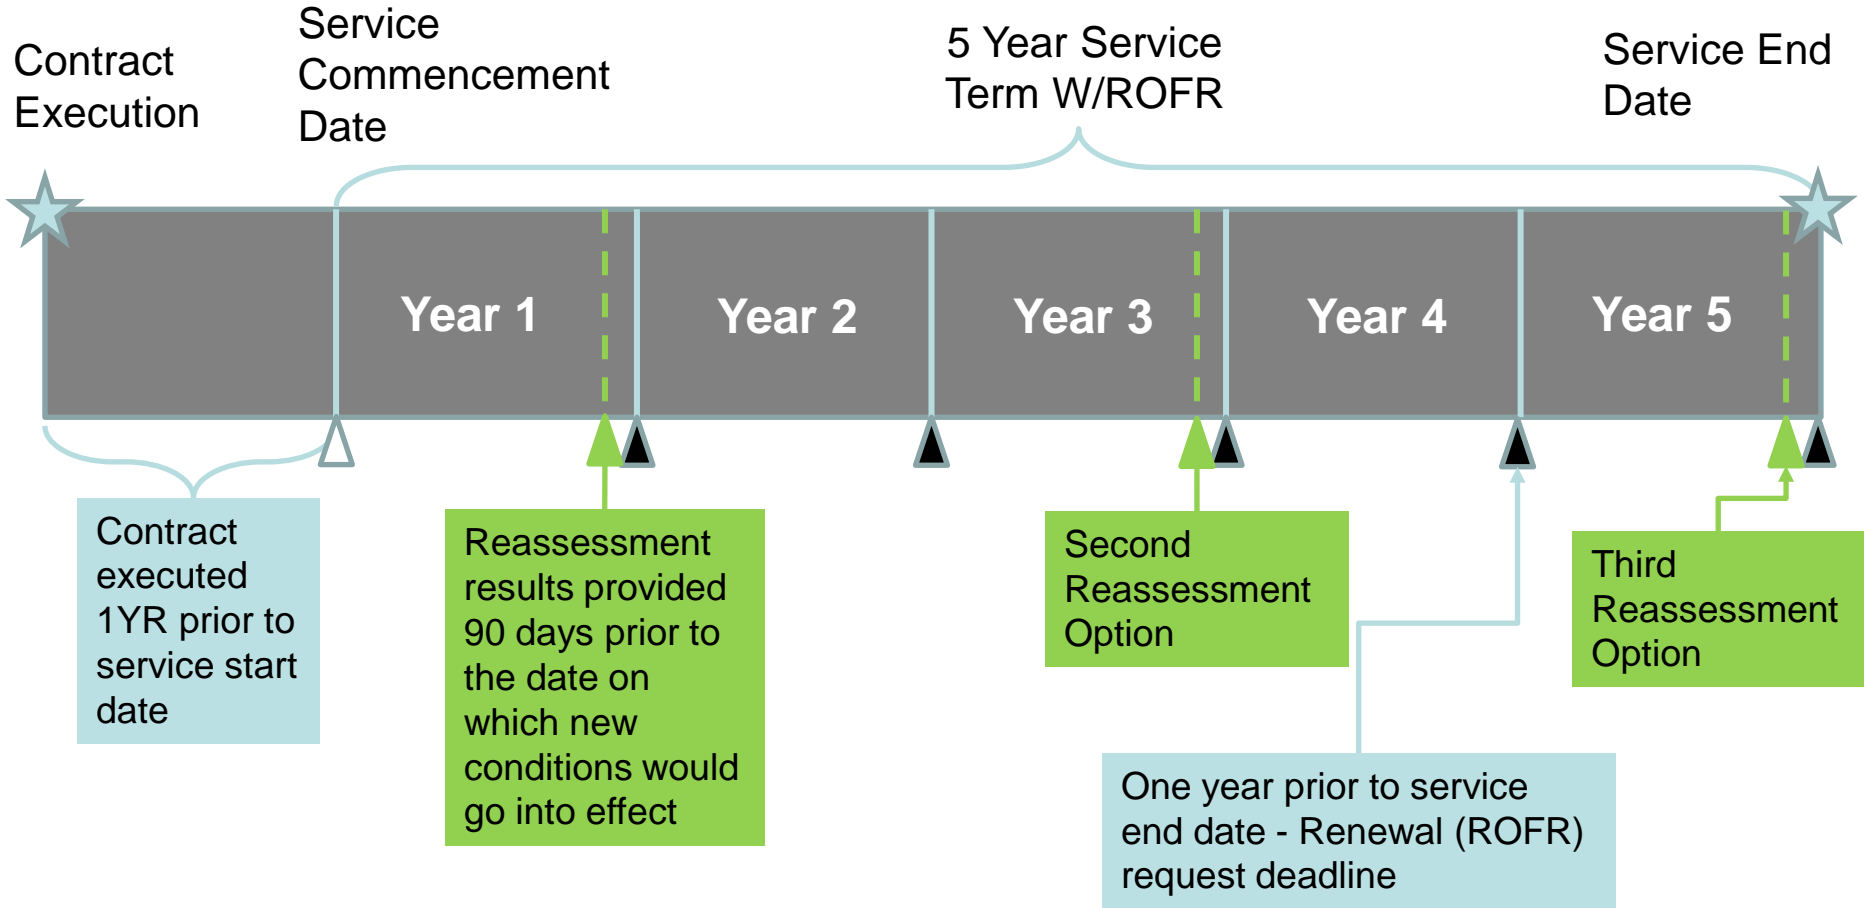

BPA's Conditional Firm 101 presentation from July 26, 2017 is available at the following [link](#).

SOA Interim Service - PTP

- In this Interim, BPA will offer Reassessment System Conditions Conditional Firm to PTP customers that only need an upgrade on SOA.
 - Interim service will stay in place until a replacement plan of service can be identified.
- Applies to queued PTP TSRs that participated in previous cluster studies and require only SOA capacity.
- Customers not accepting an offer will be removed from the queue
- Customers with existing PTP Bridge CF will be converted to Reassessment CF
- Customers who accept Reassessment CF will retain their queue position and be offered the opportunity to participate in the next cluster study.

SOA Interim Service - PTP

SOA Interim Service - PTP

- Two year reassessment is based on contract execution date not service commencement date.
- Reassessment may occur no more often than once every two years.
- If BPA chooses not to reassess by the two-year anniversary of the last reassessment, it maintains an ongoing right to perform a reassessment.
- If reassessment results in a change to the CF service, the customer has the option to discontinue service.
- Reassessment may include all network impacts.

SOA Interim Service - NT

- When the customer provides its forecast, BPA will work with the customer to identify existing system limitations.
- Between forecast and designation of the network resource, BPA will continue dialogue with NT customers to refine forecasted needs and options for firm service.
- When the customer designates a network resource, BPA intends to provide service in alignment with efforts identified in the Pro Forma Gap Analysis
 - Refer to BPA's Network Integration Presentation from August 29th [link](#)

Stop Firm Sales During High Flows

- Today, Dispatch has a tool to stop firm sales for real time reliability events across the system
- BPA intends to stop firm sales when necessary to manage forecasted high flows on SOA, at preschedule
