

Point To Point Transmission Service Request Data Exhibit

Customers with a Transmission Service Request that requires a study must provide the information below for BPA Transmission Services to complete an Individual System Impact Study or Cluster Study.

- Failure to submit this Data Exhibit by the applicable deadline will result in the TSR being DECLINED and receiving no further consideration.
- Customer may reach out to BPA Transmission Services with any questions about how to fill out the form, or to discuss with BPA Transmission Services the information the customer intends to submit in advance of submission.
- If BPA Transmission Services has questions regarding the information provided, or requires further clarification to support a Study of the TSR, BPA Transmission Services will communicate with the customer to enable opportunity for clarification and/or provision of additional information.
- If sufficient information to enable a Study cannot be provided by the customer, the TSR will be DECLINED.

The completed Data Exhibit should be submitted to TXDataExhibits@bpa.gov with a copy to the Customer’s Transmission Account Executive.

**Customer Name:
(Including Point of Contact)**

Date Submitted:

**Date Validated:
(to be completed by BPA)**

Customer TSR Information

AREF # (TSR)	Quantity (MW)	Source/Point of Receipt (POR)	Sink/Point of Delivery (POD)
-----------------	------------------	----------------------------------	---------------------------------

Companion TSR Information (If known)†

AREF # (TSR)	Quantity (MW)	Source/Point of Receipt (POR)	Sink/Point of Delivery (POD)
-----------------	------------------	----------------------------------	---------------------------------

† For TSRs with POR or POD of Northwest Hub, the Customer may submit a second AREF or Companion TSR to demonstrate a complete transmission path from the upstream resource to

downstream load being served. The Companion TSR may be associated with either an existing Transmission Service Agreement or with a pending TSR. If the Customer fails to provide a companion TSR for TSRs with a POR or POD of Northwest Hub, Customer accepts study assumptions and results as determined by BPA Transmission Services.

- For a POR of Northwest Hub, the companion TSR would cite information from the second AREF identifying the generating facility.
- For a POD of Northwest Hub, the companion TSR would cite information from the second AREF identifying the load ultimately served.

The various PORs and PODs that make up Northwest Hub do not comprise an ultimate source or ultimate sink, therefore, this information is helpful in order to define a complete transmission path from an ultimate source to an ultimate sink for the study.

RESOURCE INFORMATION

- a. Instructions - Identify the name and location of the generating facility(ies) supplying the capacity and energy along with the resource type(s).

Location of Generating Facility

(including substation name and voltage)

Name of Generation Facility

Type of Resource

(thermal, wind, solar, etc)

- b. Instructions – For Generating Facilities that are not yet operational, provide the corresponding Generator Interconnection Request number(s) (i.e. GI #) and, if the Generating Facility is interconnecting to another Transmission Provider’s transmission system, provide the name of the other Transmission Provider.

Generator Interconnection Request #:

Name of host Transmission Provider for the interconnection:

- c. Instructions: Provide the identity(ies) of the Delivering Party. Pursuant to the BPA Open Access Transmission Tariff (OATT), the Delivering Party is defined as “The entity supplying the capacity and energy transmitted at Point(s) of Receipt.”

Delivering Party:

LOAD INFORMATION

- d. Identify the location of the load ultimately served by the capacity and energy transmitted (that is, the electrical point: substation and voltage on BPA's transmission system).

Location of load ultimately served (substation and voltage)

Or,

Name of the Generating Facility(ies) displaced (i.e. reduce generation output) due to the capacity and energy transmitted.

- e. Instructions: Provide the identity(ies) of the Receiving Party. Pursuant to the BPA OATT, the Receiving Party is defined as "The entity receiving the capacity and energy transmitted by the Transmission Provider to Point(s) of Delivery."

Receiving Party:
