Maximum and minimum costs are calculated as follows:

1. For each event $(I^*J - L^*M)$ /total MWH of INC
2. Determine highest event value (maximum cost)
3. Determine lowest event value (minimum cost)

Average cost per month for each flow gate is calculated as follows:

1. For each flowgate, sum of events for each column I, J, L, M
2. For each flowgate, use sums from step 1 $(I^*J - L^*M)$ and divide by the total MWH of INC
